

WATERBOX110C*

WATERBOX110C*

Many data loggers are watertight, but those not designed to that specification may be required to operate in wet environments or even submersed in water. For these applications, we recommend the WaterBox110 and WaterBox110C. The WaterBox is made from tough, impact resistant ABS plastic with a clear polycarbonate lid. It measure 3.7" x 4.9" x 1.7" in size and can withstand temperatures from -40 to +90°C.

The WaterBox110 is submersible down to 100' (30m). It has a positive locking latch, silicone o-ring seal, coin slot vacuum release, and a durable lanyard. Inside, there is a custom foam insert that cushions and secures the data logger. The box is large enough to accomodate most 101 and 110-series devices. Contact factory to ensure compatibility.

The WaterBox110C has all the features of the WaterBox110, with the addition of an access hole and cable gland for bringing in an external probe or signal. The WaterBox110C is water resistant, but, due to the cable gland, it is not submersible.

**Enclosure only, data logger not included*
