Guidance and Advertising Skills of 2nd Gen LG CLOi GuideBot

GuideBot provides a comprehensive suite of services based on autonomous movement and artificial intelligence, such as facility guidance, destination accompaniment, signage advertising, and security patrol, photography. Smart and refined, LG CLOi GuideBot is always by your side.

Friendly and safe, no matter the time or place!

The first-generation model, which has been operating at Incheon airport since 2018, traveled more than 3,000 km over 3 years, demonstrating its technological prowess and usability. Moreover, with an elevator safety certification and 15 lower sensors, GuideBot can confidently recognize low obstacles and move around autonomously. It also serves as a smart guide by providing facility information and maps showing the user’s destination.

Ultra-effective advertising!

GuideBot offers an advertising solution in the form of large, double-sided signage, in which various settings for advertisements can be applied according to time and location. It can also act as a moving advertisement in business spaces that attract many visitors, making it visually eye-catching.

Convenient content management system!

Through the CMS page, you can easily manage menu items, configurations, signage content, and the operation schedule. Please see user manual for details.

Versatile functionality, from security patrol to docent touring!

GuideBot stores its patrol videos and enables remote monitoring*, allowing coordinated responses to emergency situations. It can also guide visitors and give information on exhibitors.

* To be added in future update
A top-class guide
and head-turning advertising specialist.

LG CLOi GuideBot
is always by your side.

Retail, Hotels / Resorts

GuideBot is effective for promotions in commercial spaces, such as by displaying shopping and promotion-related information, location-based advertisements, and the locations of facilities, as well as by guiding visitors to their destinations.

Museums, Art Galleries

Provides guidance for exhibits, detailed contactless visual and audio explanations, and tour guide functionality.

Offices, Public institutions, Hospitals

Surveillance filming based on the set patrol route and schedule, enhances the security staff's productivity via remote monitoring.*
