Qualcomm® QTS110 Tracker

An ultra-low power global device with condition monitoring sensors and next generation indoor and outdoor location technologies for real-time asset tracking.

The Qualcomm® QTS110 Tracker is designed specifically for global multi-modal (land, sea and air) supply chain tracking needs and works with the Qualcomm Aware™ Platform—our all-in-one device-to-cloud service that comes with integrated devices, global data connectivity, device management, tracking and sensing modules, and developer-friendly cloud APIs.

Highlights

Global device for supply chains
- Truly global device built using proven Qualcomm® MDM9205 LTE Modem
- Integrated security-rich SIM allowing worldwide connectivity over 2G, eMTC, or NB-IoT
- Designed for coverage over poor-RF areas

Qualcomm Aware Cloud-integrated
- Pre-integrated with Qualcomm Aware Cloud
- Qualcomm Aware service APIs for enterprise integration, location, and service management
- Intuitive web application to change device and sensor configuration and update firmware

Ultra-low power operation
- Highly customized for extremely low-power operation during positioning, cellular communication, and sensor operation

State-of-the-art positioning support
- Multi-technology positioning solution using GNSS, cellular scan-based, and Wi-Fi scan-based
- Periodic location reporting and geofence alerts can be configured using Qualcomm Aware Cloud
- Cloud-driven configurable hierarchy of location technologies for our best location at low power
- Optionally, automated cloud-led deployment of location profiles based on journey requirements

Integrated sensors and execution framework
- Supports five sensors: temperature, humidity, pressure, light, and IMU
- Use cases include temperature monitoring and real-time excursion reporting, motion detection, anti-theft support via ALS, and fall and shock detection
- Sensor configuration management via Qualcomm Aware Cloud

Related Products

This product was built using the Qualcomm® 9205 LTE Modem, a next-generation global multi-mode, multi-band chipset to support reliable, optimized connectivity for IoT applications.
### Features

- One SKU with comprehensive RF bands support from 700 MHz to 2.1 GHz enable global asset tracking
- Ready-to-use global connectivity via a SIM that carries cellular operator profiles. SIM can be OTA updated
- Positioning via cellular scan relies on serving, neighbor cells measurements. Qualcomm Terrestrial Positioning Service (TPS) with 65+ M cell sites database provides accurate location
- Integrated Wi-Fi 2.4 GHz for access point measurements. Wi-Fi measurements are cross referenced against 8+ billion AP database for precise positioning
- Suitable for indoors, urban canyons, and open sky. GNSS accuracy of <10 meters*, cellular scan-based accuracy around 100 meters*, Wi-Fi scan-based accuracy around 20 meters*
- Highly accurate sensors: Temperature sensor with 0.5°C** accuracy in -20°C to 60°C range, humidity sensor with 2-3% RH accuracy for ambient RH of 20-50%
- Low-power sensor processing
- Security-rich file system and boot, Qualcomm* Trusted Execution Environment (TEE) for TEE-SIM
- 30+ days of use with 30 minute reporting on a full charge of battery
- LEDs to indicate device, alert status
- Multitude of power optimizations such as support for 3GPP PSM feature, optimized cellular, and Wi-Fi scanning
- Cloud-configurable location and sensor parameters that offer a trade-off between performance and power

---

### Cloud Integration

- Qualcomm Aware Cloud agent on device allows device to be commissioned for customer shipment journey via the cloud.
- Via the cloud agent or dashboard, the cloud can control device level sensor, location, power, connectivity, and device management policies.
- Location, sensor telemetry data, device health data, diagnostic data, alerts sent from device to cloud are encrypted and can be unencrypted by the cloud.
- Software can be updated remotely to add new features to the device by means of a FOTA package push from the cloud.
